

15.1 Processors, Parallel Processing and Virtual Machines

Name: _____ Class: _____ Date: _____ **Total: 17 marks**

KEY WORDS risc 精简指令集 • cisc 复杂指令集 • virtual machine 虚拟机 • mimd 多指令多数据
• simd 单指令多数据

Objective

Build the skills to answer exam questions on **processors and parallelism** — RISC/CISC, pipelining, Flynn's taxonomy and virtual machines.

You must be able to:

- compare **RISC** and **CISC** processors
- explain **pipelining** and the role of **registers**
- describe **Flynn's taxonomy** and a **virtual machine**

1 Worked examples

Study these first. Each one shows the method for a question type used later — follow the steps and you can do the Practice and Exam-style questions yourself.

■ RISC vs CISC

Feature	CISC	RISC
Instruction set	many, complex	few, simple
Instruction length	variable	fixed
Memory access	many instructions	only load/store
Pipeline-friendly	harder	naturally

RISC keeps data in **many registers** (fast) and only **load/store** touch memory.

■ Pipelining

A **pipeline** overlaps the stages of consecutive instructions, like an assembly line, so once full, **one instruction completes per cycle**:

MIMD parallelism runs many instruction streams

RISC's **fixed-length, simple** instructions make each stage take equal time. A pipeline can **stall** on a **hazard** — a data hazard (a needed result isn't ready) or a control hazard (a branch).

■ Flynn's taxonomy and virtual machines

- **SISD** — one instruction, one data stream (single core).
- **SIMD** — one instruction on **many data items** (GPU).
- **MISD** — rare/theoretical.
- **MIMD** — many processors, different instructions and data (multi-core, clusters).

A **virtual machine** is **software** that behaves like a separate computer, running its own OS on top of a host — used for isolation, testing and running several OSes at once.

2 Practice

Now apply the methods above.

2.1 State **one** difference between a **RISC** and a **CISC** processor. [1]

2.2 State what **pipelining** does. [1]

2.3 State what **SIMD** stands for and give **one** example of SIMD hardware. [2]

2.4 State what a **virtual machine** is. [1]

3 Exam-style questions

3.1 Describe **two** features of a RISC processor that make it well-suited to **pipelining**. [2]

3.2 Explain how **pipelining** improves performance, and name **one** type of hazard that can stall it. [3]

3.3 State the **four** categories of **Flynn's taxonomy**. [2]

3.4 State **one** characteristic of a **massively parallel** computer. [1]

3.5 Identify **four** features of a **RISC** processor.

[4]
