

6.4 Exchange rates

Name: _____ Class: _____ Date: _____

Total: 27 marks

KEY WORDS exchange rate 汇率 • floating 浮动汇率 • depreciation 贬值 • fixed 固定汇率
• appreciation 升值

Objective

Build the skills to answer exam questions on **exchange rates** 汇率 — **floating, fixed and managed** 浮动、固定、管理浮动 systems, and **appreciation and depreciation** 升值与贬值 and their effects.

You must be able to:

- define the three exchange-rate systems
- explain how demand and supply set a floating rate
- analyse the effects of a depreciation on trade and inflation

1 Worked examples

■ A floating exchange rate

floating: D and S set e • $D \uparrow \Rightarrow$ appreciate

A floating rate is set where demand for the currency meets supply

- **Floating** 浮动汇率: set by demand and supply. **Fixed** 固定汇率: held by the central bank. **Managed** 管理浮动: mostly floats, occasional intervention.

- **Appreciation** 升值: the currency rises $\rightarrow$ exports dearer, imports cheaper.
- **Depreciation** 贬值: the currency falls $\rightarrow$ exports cheaper, imports dearer $\rightarrow$ can help the current account but raise inflation.

J-curve: after depreciation, CA first worse then better

The J-curve: a depreciation worsens the trade balance before it improves (volumes adjust slowly)

Answer shapes: an **Explain** [up to 8] answer may use a currency demand–supply diagram (AO3); **Discuss** [12] adds a judgement (AO4).

2 Practice

2.1 Define the term *exchange rate*. [2]

2.2 State the effect of a **depreciation** on the price of exports and imports. [2]

2.3 State the difference between a *floating* and a *fixed* exchange rate. [2]

3 Exam-style questions

3.1 A depreciation of a country’s currency will make its: [1]

- A exports dearer and imports cheaper
- B exports cheaper and imports dearer
- C exports and imports both cheaper
- D exports and imports both dearer

3.2 Using a currency demand and supply diagram, explain how a rise in demand for a country’s exports affects its exchange rate. [8]

3.3 Discuss whether a depreciation of the currency is good for an economy. [12]

Solutions

Economics answers are marked by **level of response** against the assessment objectives: award **AO1** knowledge, **AO2** application, **AO3** analysis and **AO4** evaluation.

2.1 the price of one currency in terms of another (2 for a clear definition; 1 for a partial idea).

2.2 exports become cheaper (to foreigners) and imports become dearer (2 for both; 1 for one).

2.3 a floating rate is set freely by demand and supply; a fixed rate is held at a set value by the central bank (2 for a clear difference; 1 for a partial idea).

3.1 B. A depreciation makes exports cheaper and imports dearer.

3.2 [8] AO1 1 + **AO3 diagram up to 4** (demand for the currency shifts right, rate rises) + AO2/AO3 up to 3 — foreigners buying more exports must buy the currency → demand for it rises → with supply unchanged, the exchange rate rises (an appreciation).

3.3 [12] AO1/AO2/AO3 up to 8 + AO4 up to 4. **Good:** cheaper exports and dearer imports can raise net exports, improving the current account and supporting jobs. **Bad:** dearer imports raise costs and can cause cost-push inflation; the benefit depends on the **Marshall–Lerner condition** (elastic demand) and may be slow (the J-curve). Judgment: a depreciation helps if export and import demand are elastic, but it risks inflation — its effect depends on elasticities and the cause of the fall.
