

2 The diagram shows two indifference curves.

What do indifference curves indicate?

- A** Consumers get more satisfaction on curve I_1 from consuming more of X and less of Y.
- B** Consumers get more satisfaction on curve I_2 from consuming less of X and more of Y.
- C** Each point on the curve represents the marginal rate of substitution of good X for good Y.
- D** Movement from I_1 to I_2 cannot be made unless the indifference curves cross.
