# Vocabulary Test 词汇测验

A-Level Physics · Week 22

Topics 13–15 · Gravitational fields, Temperature, Ideal gases

---

*Sections A and C are marked on exact spelling; Section B accepts any listed Chinese form.*

| Question | Answer                           | Marks |
|----------|----------------------------------|-------|
| 1        | uniform field                    | 1     |
| 2        | Newton's law of gravitation      | 1     |
| 3        | universal gravitational constant | 1     |
| 4        | geostationary                    | 1     |
| 5        | infinity                         | 1     |
| 6        | escape velocity                  | 1     |
| 7        | thermal equilibrium              | 1     |
| 8        | thermocouple                     | 1     |
| 9        | thermodynamic temperature        | 1     |
| 10       | Celsius                          | 1     |
| 11       | latent heat                      | 1     |
| 12       | specific latent heat             | 1     |
| 13       | intermolecular                   | 1     |
| 14       | phase change                     | 1     |
| 15       | molar gas constant               | 1     |
| 16       | Boltzmann constant               | 1     |
| 17       | 开普勒第三定律                          | 1     |
| 18       | 热量                               | 1     |
| 19       | 绝对温度                             | 1     |
| 20       | 汽化                               | 1     |
| 21       | 状态方程                             | 1     |
| 22       | 玻意耳定律                            | 1     |
