

1.5 Texture

Name: _____ Class: _____ Date: _____

Total: 11 marks

KEY WORDS implied texture 模拟肌理 • actual texture 实际肌理 • texture 肌理 • line 线条
• value scale 明度阶

Objective

Build the skills to create **texture** 肌理 — real and implied.

You must be able to:

- distinguish **actual texture** 实际肌理 from **implied texture** 模拟肌理
- create implied texture with mark-making
- use texture to add interest and realism
- explain how texture can create a focal point

1 Worked examples

Study these first. Each one shows the method for a task used later.

■ Actual vs implied texture

Actual texture can be physically felt (thick paint, collage). **Implied texture** only looks tactile — marks that suggest fur, metal, or bark on a flat surface.

■ Mark-making

Different marks imply different surfaces: dots for grain, short strokes for fur, smooth blends for glass or skin.

■ Texture and emphasis

A patch of strong texture can draw the eye and become a **focal point** against smoother areas.

2 Practice

2.1 Marks that make a flat drawing look furry create

[1]

A	B
C	D

A actual texture

B implied texture

C negative space

D a value scale

2.2 State the difference between actual and implied texture. [2]

2.3 State one way texture can create a focal point. [1]

3 Studio & portfolio tasks

3.1 Make an **implied-texture sampler**.

(a) Fill four boxes with marks implying: fur, metal, wood grain, and glass. [4]

3.2 Plan texture for a portfolio piece.

(a) Name where actual or implied texture will lead the eye. [1]

(b) Thumbnail showing textured vs smooth areas. [2]
