

4.2 Straight-Line Motion: Position, Velocity, and Acceleration

Name: _____ Class: _____ Date: _____ Total: 9 marks

KEY WORDS velocity 速度 • position 位置 • acceleration 加速度 • speed 速率 • at rest 静止

Objective

Build the skills to answer exam questions on **straight-line motion: position, velocity, and acceleration**.

You must be able to:

- relate **position** 位置, **velocity** 速度, and **acceleration** 加速度 by differentiation
- find when an object is at rest

1 Worked examples

Study these first. Each one shows the method for a question type used later.

■ Straight-line motion

- velocity $v(t) = x'(t)$;
- acceleration $a(t) = v'(t) = x''(t)$;
- **speed** $= |v(t)|$.

The object is **at rest** when $v = 0$; it moves in the positive direction when $v > 0$.

■ Example

$x(t) = t^2 - 4t$: $v(t) = 2t - 4 = 0$ at $t = 2$.

2 Practice

2.1 State velocity in terms of position. [1]

2.2 State acceleration in terms of velocity. [1]

2.3 For $x(t) = t^2 - 4t$, find $v(t)$ and the time at rest. [2]

3 Exam-style questions

3.1 Velocity is the derivative of [1]

- | | |
|---|---|
| A | B |
| C | D |
- A acceleration
B position
C speed
D distance

3.2 The object is at rest when [1]

- | | |
|---|---|
| A | B |
| C | D |
- A $a = 0$
B $v = 0$
C $x = 0$
D $t = 0$

3.3 $x(t) = t^2 - 4t$.

(a) Find $v(t)$. [1]

(b) Find $a(t)$. [1]

(c) Find when $v = 0$. [1]
