

10.12 Lagrange Error Bound

Name: _____ Class: _____ Date: _____

Total: 12 marks

KEY WORDS lagrange error bound 拉格朗日误差界 • taylor polynomial 泰勒多项式

Objective

Build the skills to answer exam questions on the **Lagrange error bound**.

You must be able to:

- apply $|R_n(x)| \leq \frac{\max |f^{(n+1)}(z)|}{(n+1)!} |x - a|^{n+1}$
- bound the $(n+1)$ th derivative on the interval
- compute a numerical error bound

1 Worked examples

Study these first. Each one shows the method for a question type used later — follow the steps and you can do the Practice and Exam-style questions yourself.

■ The Lagrange error bound

The error of the n th Taylor polynomial is bounded by

$$|R_n(x)| \leq \frac{\max |f^{(n+1)}(z)|}{(n+1)!} |x - a|^{n+1},$$

where the max is over z between a and x .

■ Bounding the derivative

For $f(x) = \sin x$, every derivative is $\pm \sin$ or $\pm \cos$, so $|f^{(n+1)}(z)| \leq 1$. This makes the bound easy: replace the max with 1.

■ A worked bound

Approximating $\sin(0.2)$ with the 3rd-degree Maclaurin polynomial ($a = 0$, $n = 3$):

$$|R_3| \leq \frac{1}{4!} |0.2|^4 = \frac{0.0016}{24} \approx 6.7 \times 10^{-5}.$$

■ The routine

1. Find $\max |f^{(n+1)}|$ on the interval.
2. Multiply by $\frac{|x - a|^{n+1}}{(n+1)!}$.

2 Practice

Now apply the methods above.

2.1 State the Lagrange error bound. [1]

2.2 For $f(x) = \cos x$, state a bound for $|f^{(n+1)}(z)|$. [1]2.3 Compute $\frac{1}{3!}(0.1)^3$. [2]

3 Exam-style questions

3.1 In the Lagrange error bound, the factor $(n+1)!$ appears in the [1]

A	B
C	D

- A numerator
- B denominator
- C exponent
- D derivative

3.2 The function $f(x) = e^x$ is approximated near 0 by its 2nd-degree Maclaurin polynomial, for $0 \leq x \leq 0.5$. On this interval $|f'''(z)| \leq e^{0.5} < 2$.(a) Write the Lagrange bound for $|R_2(0.5)|$. [2](b) Evaluate the bound using $|f'''| \leq 2$. [2]

3.3 Bound the error when $\sin(0.3)$ is approximated by the 1st-degree Maclaurin polynomial $P_1(x) = x$. [3]
