

10.14 Finding Taylor or Maclaurin Series for a Function

Name: _____ Class: _____ Date: _____

Total: 12 marks

KEY WORDS geometric series 几何级数

Objective

Build the skills to answer exam questions on **finding Taylor and Maclaurin series**.

You must be able to:

- recall the key **Maclaurin series** for e^x , $\sin x$, $\cos x$, $\frac{1}{1-x}$
- build new series by **substitution** into a known one
- write a series in summation form

1 Worked examples

Study these first. Each one shows the method for a question type used later — follow the steps and you can do the Practice and Exam-style questions yourself.

■ The must-know Maclaurin series

$$e^x = \sum_{n=0}^{\infty} \frac{x^n}{n!}, \quad \sin x = \sum_{n=0}^{\infty} \frac{(-1)^n x^{2n+1}}{(2n+1)!}, \quad \cos x = \sum_{n=0}^{\infty} \frac{(-1)^n x^{2n}}{(2n)!}, \quad \frac{1}{1-x} = \sum_{n=0}^{\infty} x^n.$$

■ Building by substitution

For e^{x^2} , substitute x^2 into the e^x series:

$$e^{x^2} = \sum_{n=0}^{\infty} \frac{(x^2)^n}{n!} = \sum_{n=0}^{\infty} \frac{x^{2n}}{n!}.$$

■ Another substitution

$$\frac{1}{1+x} = \frac{1}{1-(-x)} = \sum_{n=0}^{\infty} (-x)^n = \sum_{n=0}^{\infty} (-1)^n x^n.$$

■ Writing out terms

$\sin x = x - \frac{x^3}{6} + \frac{x^5}{120} - \dots$. Being able to write the first few terms **and** the general summation form is expected.

2 Practice

Now apply the methods above.

2.1 Write the Maclaurin series for e^x (summation form). [1]2.2 Write the first three nonzero terms of $\cos x$. [2]2.3 Use substitution to write the Maclaurin series for e^{-x} . [2]

3 Exam-style questions

3.1 The Maclaurin series for $\frac{1}{1-x}$ is [1]

A	B
C	D

A $\sum (-1)^n x^n$

B $\sum x^n$

C $\sum \frac{x^n}{n!}$

D $\sum nx^n$

3.2 Find the Maclaurin series for $\frac{1}{1+x^2}$ (substitute into the geometric series). [3]

3.3 Find the first three nonzero terms of the Maclaurin series for $x \sin x$. [3]
