|--------------------------------|---|-----|------|-----|------|-----|
| $t$<br>(seconds)               | 0 | 60  | 90   | 120 | 135  | 150 |
| $f(t)$<br>(gallons per second) | 0 | 0.1 | 0.15 | 0.1 | 0.05 | 0   |

1. A customer at a gas station is pumping gasoline into a gas tank. The rate of flow of gasoline is modeled by a differentiable function  $f$ , where  $f(t)$  is measured in gallons per second and  $t$  is measured in seconds since pumping began. Selected values of  $f(t)$  are given in the table.

- (a) Using correct units, interpret the meaning of  $\int_{60}^{135} f(t) \, dt$  in the context of the problem. Use a right

Riemann sum with the three subintervals  $[60, 90]$ ,  $[90, 120]$ , and  $[120, 135]$  to approximate the value of

$$\int_{60}^{135} f(t) \, dt.$$

- (b) Must there exist a value of  $c$ , for  $60 < c < 120$ , such that  $f'(c) = 0$ ? Justify your answer.

- (c) The rate of flow of gasoline, in gallons per second, can also be modeled by  $g(t) = \left(\frac{t}{500}\right) \cos\left(\left(\frac{t}{120}\right)^2\right)$  for

$0 \leq t \leq 150$ . Using this model, find the average rate of flow of gasoline over the time interval  $0 \leq t \leq 150$ .

Show the setup for your calculations.

- (d) Using the model  $g$  defined in part (c), find the value of  $g'(140)$ . Interpret the meaning of your answer in the context of the problem.

Write your responses to this question only on the designated pages in the separate Free Response booklet. Write your solution to each part in the space provided for that part.

Graph of  $f$

3. The function  $f$  is defined on the closed interval  $[-5, 4]$ . The graph of  $f$  consists of three line segments and is shown in the figure above. Let  $g$  be the function defined by  $g(x) = \int_{-3}^x f(t) \, dt$ .

- (a) Find  $g(3)$ .
- (b) On what open intervals contained in  $-5 < x < 4$  is the graph of  $g$  both increasing and concave down? Give a reason for your answer.
- (c) The function  $h$  is defined by  $h(x) = \frac{g(x)}{5x}$ . Find  $h'(3)$ .
- (d) The function  $p$  is defined by  $p(x) = f(x^2 - x)$ . Find the slope of the line tangent to the graph of  $p$  at the point where  $x = -1$ .
