

1.15 String Manipulation

Name: _____ Class: _____ Date: _____

Total: 8 marks

KEY WORDS string 字符串 • concatenation 拼接 • immutable 不可变 • object 对象
• reference 引用

Objective

Build the skills to answer exam questions on **String manipulation**.

You must be able to:

- create **String** 字符串 objects and combine them with **concatenation** 拼接 (+)
- call methods such as `length`, `substring`, and `indexOf`
- understand that a String is **immutable** 不可变
- compare strings with `equals` and `compareTo`, not `==`

1 Worked examples

Study these first. Each one shows the method for a question type used later.

■ Strings and methods

Strings are made from literals and joined with `+`. They are **zero-indexed** (the first character is at index 0) and **immutable** (methods return **new** strings):

- `"hello".length()` is 5
- `"hello".substring(1, 3)` is `"el"` (indices 1 and 2)
- `"hello".indexOf("l")` is 2

■ Comparing strings

Use `s.equals(t)` for equality and `s.compareTo(t)` for order — **not** `==`, which compares references.

2 Practice

2.1 State the result of `"cat" + "fish"`.

[1]

2.2 State the value of `"data".length()`. [1]

2.3 State why you should compare strings with `equals`, not `==`. [1]

3 Exam-style questions

3.1 Strings in Java are [1]

A	B
C	D

- A mutable
- B immutable
- C numbers
- D booleans

3.2 The first character of a String is at index [1]

A	B
C	D

- A 1
- B 0
- C -1
- D its length

3.3 String `s = "computer";`.

(a) State the value of `s.length()`. [1]

(b) State the value of `s.substring(0, 3)`. [1]

(c) State the correct way to test whether `s` equals `"computer"`. [1]
