

3.3 Anatomy of a Class

Name: _____ Class: _____ Date: _____ **Total: 9 marks**

KEY WORDS class 类 • constructor 构造函数 • instance variables 实例变量 • encapsulation 封装

Objective

Build the skills to answer exam questions on **the anatomy of a class**.

You must be able to:

- identify the parts of a **class** 类: instance variables, constructors, and methods
- declare **instance variables** 实例变量 to hold each object's state
- use **private** and **public** to control **encapsulation** 封装

1 Worked examples

Study these first. Each one shows the method for a question type used later.

■ Parts of a class

- **Instance variables** — hold the object's **state** (data).
- **Constructors** — set up a new object.
- **Methods** — the object's behaviour.

■ Encapsulation

Declaring instance variables **private** **hides** them, so they can only be changed through **public** methods — this is **encapsulation**, which protects an object's data.

2 Practice

2.1 Name the three parts of a class. [2]

2.2 State what instance variables hold. [1]

2.3 State the access modifier used to hide data. [1]

3 Exam-style questions

3.1 The state of an object is held in its [1]

- | | |
|---|---|
| A | B |
| C | D |
- A** methods
 - B** instance variables
 - C** constructors
 - D** comments

3.2 To hide a class's data, declare it [1]

- | | |
|---|---|
| A | B |
| C | D |
- A** **public**
 - B** **private**
 - C** **static**
 - D** **void**

3.3 A **BankAccount** class stores a balance.

- (a) Name what the balance is (which part of the class). [1]
- (b) State the modifier to keep it hidden. [1]
- (c) Name the idea of hiding data behind methods. [1]
