

Solutions

Each answer shows the steps, then the **result**.

2.1

- a collection of related values processed together

2.2

- one loop can process every value, instead of naming each separately

2.3

- storing, reading, or summarizing values (any one)

3.1 B

3.2 B

3.3

(a)

- an array (or list)

(b)

- find the sum, average, or maximum (any one)

(c)

- all values can be processed with a single loop
