

Solutions

Each answer shows the steps, then the **result**.

2.1 B

- **hatching density** builds value in ink

2.2

- one angle per plane keeps the value even and the edges between planes crisp

2.3

- it curves around the form, so shading also describes volume

3.1

- five clearly different values by spacing; a smooth dark-to-light run; the form reads as round; strokes curve over the surface; crisp plane edges where planes change

3.2

- three planes at three densities; the cube reads as solid with crisp edges
