

# 1.5 Supply

Name: \_\_\_\_\_ Class: \_\_\_\_\_ Date: \_\_\_\_\_ **Total: 9 marks**

**KEY WORDS** supply 供给 • determinants of supply 供给的决定因素 • law of supply 供给定律  
• subsidies 补贴

## Objective

Build the skills to answer exam questions on **supply**.

**You must be able to:**

- state the **law of supply** 供给定律 and explain the direct price-quantity relationship
- distinguish a change in **quantity supplied** (movement) from a change in **supply** (shift)
- identify the **determinants of supply** 供给的决定因素
- explain how the upward-sloping supply curve reflects rising marginal costs

## 1 Worked examples

Study these first. Each one shows the method for a question type used later.

### ■ The law of supply

As price **rises**, quantity supplied **rises** (a direct relationship), so the supply curve slopes **upward** — higher prices cover the rising marginal cost of extra output.

### ■ Movement vs shift

A change in the good's **own price** is a **movement along** the curve. A change in a **determinant** shifts the whole curve.

### ■ Determinants of supply

Input prices, technology, expectations, taxes and subsidies, and the number of sellers.

## 2 Practice

**2.1** State the law of supply. [1]

**2.2** State whether a fall in input prices causes a movement along or a shift of the supply curve. [1]

**2.3** List three determinants of supply. [2]

## 3 Exam-style questions

**3.1** The supply curve slopes [1]

- **A** downward
- **B** upward
- **C** vertically
- **D** horizontally

**3.2** A new technology that lowers production costs shifts the supply curve [1]

- **A** to the left
- **B** to the right
- **C** not at all
- **D** vertically

**3.3** The government places a tax on producing a good.

(a) State the effect on supply. [1]

(b) State the direction the supply curve shifts. [1]

(c) Name one other determinant of supply. [1]

## Solutions

---

**2.1** as the price of a good rises, the quantity supplied rises (other things equal).

**2.2** a shift of the supply curve (input price is a determinant).

**2.3** any three of: input prices, technology, expectations, taxes/subsidies, number of sellers.

**3.1 B.**

**3.2 B.**

**3.3** (a) supply falls. (b) to the left. (c) any one of: input prices, technology, expectations, number of sellers.
