

1.12 Transformations of Functions

Name: _____ Class: _____ Date: _____

Total: 8 marks

KEY WORDS transformation 变换 • horizontal translation 水平平移
• vertical translation 竖直平移 • translations 平移 • function 函数

Objective

Build the skills to answer exam questions on **transformations of functions**.

You must be able to:

- describe $g(x) = f(x) + k$ as a **vertical translation** 竖直平移
- describe $g(x) = f(x + h)$ as a **horizontal translation** 水平平移

1 Worked examples

Study these first. Each one shows the method for a question type used later.

■ Translations

- $g(x) = f(x) + k$ shifts the graph **vertically** by k (up if $k > 0$).
- $g(x) = f(x + h)$ shifts the graph **horizontally** by $-h$ (so $f(x - 2)$ shifts **right** 2).

■ Example

From $f(x) = x^2$: $g(x) = x^2 + 3$ shifts up 3; $h(x) = (x - 1)^2$ shifts right 1, with vertex at $(1, 0)$.

2 Practice

2.1 State the transformation given by $f(x) + 3$. [1]

2.2 State the transformation given by $f(x - 2)$. [1]

2.3 Describe the graph of $g(x) = f(x) + 5$ compared with f . [1]

3 Exam-style questions

3.1 $g(x) = f(x) + k$ is a [1]

A	B
C	D

- A horizontal shift
- B vertical shift by k
- C reflection
- D stretch

3.2 $g(x) = f(x - 4)$ shifts the graph of f [1]

A	B
C	D

- A left 4
- B right 4
- C up 4
- D down 4

3.3 Start from $f(x) = x^2$.

(a) Describe $g(x) = x^2 + 3$. [1]

(b) Describe $h(x) = (x - 1)^2$. [1]

(c) State the vertex of h . [1]
