

4.1 Parametric Functions

Name: _____ Class: _____ Date: _____

Total: 9 marks

KEY WORDS parametric function 参数函数 • parameter 参数

Objective

Build the skills to answer exam questions on **parametric functions**.**You must be able to:**

- interpret a **parametric function** 参数函数 $x = f(t)$, $y = g(t)$
- eliminate the **parameter** 参数 to relate x and y

1 Worked examples

Study these first. Each one shows the method for a question type used later.

■ Parametric functions

Both coordinates depend on a **parameter** t : $x = f(t)$, $y = g(t)$. As t varies, (x, y) traces a curve. Eliminate t to get a direct relation between x and y .

■ Example

$x = t$, $y = t^2$: since $x = t$, substitute to get $y = x^2$.

2 Practice

2.1 State what a parameter is in a parametric function. [1]

2.2 For $x = t$, $y = 2t$, eliminate t . [2]

2.3 For $x = t + 1$, $y = t$, find the point at $t = 2$. [1]

3 Exam-style questions

3.1 In parametric form, x and y are both functions of [1]

A	B
C	D

- A** each other
- B** a parameter t
- C** the slope
- D** the origin

3.2 For $x = t$, $y = t^2$, eliminating t gives [1]

A	B
C	D

- A** $y = x$
- B** $y = x^2$
- C** $x = y^2$
- D** $y = 2x$

3.3 $x = 2t$, $y = t - 1$.

- (a) Find the point at $t = 0$. [1]
- (b) Find the point at $t = 3$. [1]
- (c) Eliminate t to relate x and y . [1]
