7.3 Justifying a Claim About a Population Mean Based on a Confidence Interval

Name: _____ Class: _____ Date: _____ **Total: 18 marks**

KEY WORDS claim • population mean • plausible • individual • confidence level • convincing evidence

Objective

Build the skills to answer exam questions on **justifying a claim about a mean from a confidence interval** .

You must be able to:

- decide whether a claimed value of μ is plausible
- explain how the confidence level changes the conclusion
- avoid common mistakes in interpreting an interval for a mean

1 Key knowledge and worked examples

Is the claimed mean plausible?

idea	rule
inside	a claimed value inside the interval is plausible
outside	a claimed value outside the interval is not plausible: there is convincing evidence against it

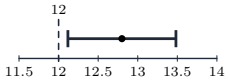

Worked example. A 95% interval for the mean mass of a farm's eggs is (58.2, 61.0) g. A claim of 62 g is not plausible, because 62 lies above the interval.

Answer shapes: say where the claimed value lies, then give the decision about the claim in context.

2 Practice

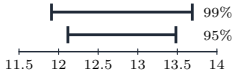

2.1 A 95% interval for μ is (12.1, 13.5). Decide whether the claim $\mu = 12$ is plausible. [2]

2.2 For the same interval, decide whether the claim $\mu = 13$ is plausible. [2]

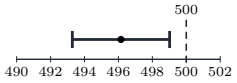

2.3 Explain whether a 99% interval from the same sample could include 12. [2]

3 Exam-style questions

3.1 Boxes of a cereal are labelled 500 g. A 95% confidence interval for the mean mass of all the boxes is (493.2, 499.1) g.

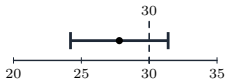

(a) Interpret the interval. [2]

(b) Explain whether there is convincing evidence that the mean mass is less than 500 g. [2]

3.2 From a random sample of 30 workers in a city, a 95% confidence interval for the mean commute time is (24.1, 31.5) minutes.

(a) Interpret the interval. [2]

(b) A report says the mean commute is 30 minutes. Explain whether the interval supports this. [2]

(c) Explain whether a 90% interval from the same data would be wider or narrower. [2]

(d) A student says: "95% of the city's workers commute for between 24.1 and 31.5 minutes." Explain the mistake. [2]
