1 The Enlightenment	Revolutions The Enlightenment The Enlightenment Unit 5 covers 1750 to 1900, and it has two engines running at once: an intellectual revolution that changed how people justified political authority, and an industrial revolution that changed how societies produced and lived. Most questions ask you to connect them. ■ Individualism 个人主义, natural rights 天赋权利, and the social contract 社会契约. ■ Calls for religious tolerance 宗教宽容 and limits on established authority.
---	---

Revolutions The Enlightenment The Enlightenment, continued Those ideas influenced reform movements 改革运动: the expansion of suffrage, the abolition of slavery, and demands for women's suffrage 妇女选举权诉求 alongside an emergent feminism 女权主义 that challenged political and gender hierarchies.	Revolutions The Enlightenment Idea, reason, movement NATURAL RIGHTS, the SOCIAL CONTRACT, individualism, empirical method if authority rests on consent, it can be withdrawn a right held by birth cannot be held by some only the same argument, applied by those it excluded REVOLUTIONS —including rebellions led by colonial subjects in the Americas ABOLITION and other reform movements demands for WOMEN'S SUFFRAGE, and feminism The middle column is the marks. "Enlightenment ideas led to revolution" is the claim; the reason beside the arrow is the explanation

2

Nationalism and Revolution

Revolutions
└ Nationalism and Revolution

Nationalism and Revolution

Discontent with monarchist and imperial rule encouraged **revolution** 革命. Enlightenment ideas, as reflected in revolutionary documents, justified those movements, and **colonial** subjects in the Americas led a series of **rebellions** inspired by them – the examinable set being the American, French, Haitian, and Latin American revolutions.

Answers that give only the idea, or only the grievance, explain nothing.

3

The Industrial Revolution Begins

Revolutions
└ The Industrial Revolution Begins

Why Britain, and what each factor supplied

A **variety of factors** contributed to the growth of industrial production: access to **coal** 煤炭 and **iron** 铁, navigable rivers and canals, **agricultural productivity** 农业生产率 that freed...

The **factory system** 工厂制度 concentrated production in a single location under supervision, replacing dispersed household production.

Revolutions
└ The Industrial Revolution Begins

The Industrial Revolution Begins

A **variety of factors** contributed to the growth of industrial production: access to **coal** 煤炭 and **iron** 铁, navigable rivers and canals, **agricultural productivity** 农业生产率 that freed labour, **capital** 资本 and legal protection for it, urbanisation, and access to raw materials and markets through overseas empire.

That change – as much organisational as technical – is what made the scale of output possible.

4

Industrialisation Spreads

Revolutions

Industrialisation Spreads

Industrialisation Spreads

The rapid development of **steam-powered** 蒸汽动力 industrial production in Europe spread to other regions, and as new methods became common, states that industrialised gained enormous advantages in wealth and military power over those that did not.

Revolutions

Industrialisation Spreads

The first and the second, kept apart

	THE FIRST	THE SECOND
WHAT DRIVES IT	coal and the steam engine	electricity, oil, the internal combustion engine
WHAT IT BUILDS	the factory system; textiles and iron	steel, chemicals, and the goods made from them
WHAT IT MOVES	railroads and steamships	the telegraph — information, faster than any vehicle

- Workers organised, often in **labour unions** 工会, and pressed for shorter hours, safety, and wages.
- Alternative visions** of society emerged - **socialism** 社会主义, **communism** 共产主义, and **anarchism** 无政府主义 - as critiques of industrial capitalism.

5

Government, Economy, and Reaction

Revolutions

Government, Economy, and Reaction

Government, Economy, and Reaction

As industrial influence grew, a small number of **states sponsored industrialisation** 国家推动工业化 directly – the standard examples being Meiji Japan, Russia under state-led programmes, and Egypt under Muhammad Ali.

- Workers organised, often in **labour unions** 工会, and pressed for shorter hours, safety, and wages.
- Alternative visions** of society emerged – **socialism** 社会主义, **communism** 共产主义, and **anarchism** 无政府主义 – as critiques of industrial capitalism.
- Some governments passed **reform legislation** 改革立法 on working conditions, child labour, and public health.
- The expansion of industrialising states led to **internal reform movements** 内部改革运动 elsewhere in Asia, as states tried to respond to new pressure.

Revolutions

Government, Economy, and Reaction

Government, Economy, and Reaction, continued

Western European countries began abandoning **mercantilism** and adopting **free trade** 自由贸易 policies, and the global nature of trade and production contributed to the proliferation of **transnational businesses** 跨国企业 and new financial instruments.

Revolutions

Government, Economy, and Reaction

Correct the system, or replace it?

IMPROVE IT	REPLACE IT
LABOUR UNIONS — bargain inside the system	SOCIALISM — the productive property should be held in common
REFORM LEGISLATION — the state limits the worst of it	COMMUNISM and ANARCHISM — the order itself has to go

The split is not how **angry** each response is — it is whether industrial society is to be corrected or ended

6

Society in the Industrial Age

Revolutions
└ Society in the Industrial Age

Society in the Industrial Age

New **social classes** 社会阶级 formed, including a **middle class** 中产阶级 and an **industrial working class** 工业工人阶级, each with its own culture and politics.

7

Continuity and Change in the Industrial Age

Revolutions
└ Continuity and Change in the Industrial Age

Continuity and Change in the Industrial Age

The unit's reasoning skill is **continuity and change**.

Production and class structure changed fundamentally, while imperial competition, coerced labour in colonised regions, and inequality persisted in new forms.

Revolutions
└ Continuity and Change in the Industrial Age

Exam tips

- Answer "why Britain first" with **several factors at once** – coal, capital, agriculture, empire – not one cause.
- The **factory system** is an organisational change; say what it replaced.
- For revolutions, pair an **idea** with a **grievance**. Either alone explains nothing.
- **State-sponsored industrialisation** (Meiji Japan, Russia, Egypt) is the contrast to the British pattern.
- Give the reactions as a set: **unions, socialism and communism, and reform legislation**.
- Living standards rose **eventually and unevenly**. Saying so is what makes an answer an evaluation.

8

Recap

Unit 5 – key takeaways

1 Britain

coal, capital, agriculture, empire –
several at once

2 Factory

an organisational change: say
what it replaced

3 Revolutions

pair an idea with a grievance

4 Reactions

unions, socialism/communism,
reform legislation

Check yourself

- 1 Why Britain first – how many factors?
- 2 What kind of change is the factory system?
- 3 What pair explains a revolution?
- 4 Name the three reactions as a set.

Answers: several at once ▪ organisational ▪ idea + grievance ▪ unions, socialism, reform laws
