1. GAC005 Computing I: Introduction to Computing for Academic Study

Starter Quiz ·

GAC Computing Name: _____ Score: _____

1. A top-ranked search result still needs its evidence checked for accuracy.

   ☐ True ☐ False

2. Two teammates must produce one report. Which plan best supports a consistent final draft?
   ☐ Let the strongest writer redraft every section alone at the end
   ☐ Write separately, then paste the sections together unread
   ☐ Assign sections and cross-review their evidence links
   ☐ Assign sections and let each writer choose their own style

3. Which scope is feasible and accurately bounded for a class survey?
   ☐ Explain every transport problem in the country
   ☐ Prove what every city resident prefers
   ☐ Collect all classmates' names and publish them
   ☐ Describe journey methods among respondents in one class

4. Your slide combines a class travel chart with an unrelated school lunch menu. What is the best revision?
   ☐ Add flashing text
   ☐ Separate the unrelated messages
   ☐ Remove all labels
   ☐ Shrink the font until both fit

5. Your five-minute rehearsal is 90 seconds too long. What should you try first?
   ☐ Remove the conclusion, since the audience has heard the evidence
   ☐ Cut repetition and optional detail, then time it again
   ☐ Speak faster through every section so all of it still fits
   ☐ Keep the talk and ask for an extra 90 seconds on the day

6. A video plan allocates 15, 30, 40, 20 and 15 seconds. What is its total duration in seconds?

   _____

7. You need evidence comparing total emissions over a vehicle lifetime. Which query best matches that claim?
   ☐ best electric vehicle models to buy this year review
   ☐ electric vehicle lifecycle emissions petrol comparison
   ☐ why electric cars have no exhaust and are zero emission
   ☐ electric car tailpipe emissions while driving in cities

8. A single late paste proves that its author did no earlier work.

   ☐ True ☐ False

9. Naming one accountable owner for a task makes responsibility clearer than writing “the group”.

   ☐ True ☐ False

10. A chart presented aloud still needs visible labels and units.

    ☐ True ☐ False

Answers ·

GAC Computing

1. **True**

   True. Ranking reflects relevance and popularity signals, not a guarantee of accuracy; open the page and inspect its evidence.

2. **Assign sections and cross-review their evidence links**

   Section ownership clarifies responsibility; review of the joins checks that claims and evidence agree.

3. **Describe journey methods among respondents in one class**

   A defined class sample supports a description of respondents, not a claim about every resident.

4. **Separate the unrelated messages**

   One main message helps listeners follow the evidence. Related supporting detail can stay together.

5. **Cut repetition and optional detail, then time it again**

   Protect the main claim and evidence while removing material that does not serve them.

6. **120**

   15 + 30 + 40 + 20 + 15 = 120 seconds, or two minutes.

7. **electric vehicle lifecycle emissions petrol comparison**

   Lifecycle and comparison specify the measure and comparison. Search terms help find candidates; they do not verify them.

8. **False**

   Offline drafts and research may precede the paste. Use task records, drafts and discussion alongside history.

9. **True**

   True. A named owner and a named reviewer make it clear who acts and who checks; “the group” lets everyone assume someone else will.

10. **True**

    True. Different audience members need different access; readable labels and units support those who cannot follow the spoken explanation.
