Starter Quiz ·

GAC Academic English Name: _____ Score: _____

1. What is the main job of Script A?

   ☐ Report observations from four afternoons

   ☐ Tell visitors when the corner opens and how to suggest changes

   ☐ Prove that one table layout causes longer visits

2. Which time applies to the kitchen this Saturday?

   ☐ Seven in the evening

   ☐ Nine in the evening

   ☐ Seven on Sunday morning

3. What is the requested output?

   ☐ Four posters ready Tuesday morning

   ☐ Forty event posters ready by Thursday afternoon

   ☐ A guaranteed Wednesday delivery of all orders

4. How many volunteers are described in the fictional script?

   _____

5. Why is “paper, water, tray, sheet” insufficient as a process description?

   ☐ A process description must contain no nouns

   ☐ It gives no actions or sequence

   ☐ The diagram provides no information

6. By how many kilograms did the fictional total fall from the first to third Friday?

   _____

7. In Script B, what does “might help conversation” mean?

   ☐ A helpful effect is possible but has not been proved

   ☐ The table layout certainly caused longer visits

   ☐ The group did not observe the conversation corner

8. Which TWO details are supported by the script?

   ☐ Residents must leave the whole building

   ☐ The dining area remains open until nine

   ☐ Normal kitchen hours return on Monday

   Tick every correct option.

9. The meeting confirms that printing will start on Wednesday regardless of the checks.

   ☐ True ☐ False

10. The survey shows an association between regular sleep times and concentration scores, not that one caused the other.

    ☐ True ☐ False

Answers ·

GAC Academic English

1. **Tell visitors when the corner opens and how to suggest changes**

   Script A announces the Friday opening at four and directs visitors to suggestion cards at the desk. The observation and causal question belong to Script B.

2. **Seven in the evening**

   The temporary Saturday closing time is seven; nine is the normal time and the dining-area time.

3. **Forty event posters ready by Thursday afternoon**

   Maya specifies forty posters and Thursday afternoon readiness. Wednesday is only a conditional start.

4. **30**

   The script states thirty volunteers. These are invented teaching data, not a real health finding.

5. **It gives no actions or sequence**

   Objects need actions and relationships to explain what happens.

6. **3**

   $8 - 5 = 3$ kg. This is a room total, not a measured per-person reduction.

7. **A helpful effect is possible but has not been proved**

   "Might" hedges the claim. The group observed one library and did not record why people stayed, so it cannot establish cause.

8. **No cooking equipment is available in the dining area; The dining area remains open until nine**

   The notice keeps the dining area open but excludes cooking equipment. Normal kitchen hours return Sunday, and residents need not leave.

9. **False**

   The start requires both paper arrival and approved text; the script explicitly says it is not yet promised.

10. **True**

    True. Sleep patterns were not assigned, and workload and familiarity differed, so the script supports association only.
