8. What is the difference between the attendance counts?

9. The log proves that the other fifteen had no access problem.
 - ☐ True ☐ False
10. A voluntary survey may not represent residents who chose not to respond.
 - ☐ True ☐ False

5. GAC014 Academic English III: Listening & Speaking Skills

Answers ·

GAC Academic English

1. **Whether peer comments help revision**

The opening explicitly asks about peer comments and revision.

2. **Appointment attendance**

The script reports whether people attended, not treatment results.

3. **A friend's reported experience**

A provides one anecdote, not universal or legal evidence.

4. **12**

The fictional survey states twelve preferred group activities.

5. **2**

$10 - 8 = 2$ people. Both groups contained twelve volunteers.

6. **6**

Six double bookings were recorded among forty requests over two weeks.

7. **12**

Twelve revised; sixteen is the number of volunteers.

8. **4**

$16 - 12 = 4$ people, with twenty in each group.

9. **False**

The script explicitly says their possible access problems were not recorded.

10. **True**

True. Non-respondents may have different needs, so the sample is not established as representative of every resident.
