assumption	discourse	arduous
equivalence	constraint	indeterminate
conditional probability	numerical entry	qualification

Requiring much effort.	Connected language with structure and meaning.	A statement accepted as a starting point for reasoning, analysis or a model.
Not fixed by the given information.	A condition or limit that a valid solution must satisfy.	Matching meaning in the completed sentence.
A limit that makes a position more precise.	An answer entered as a number rather than an option.	The probability of an event given that another event has occurred.

objection	conjecture	dogmatic
modest	evasive	concession
scope	self-selection	necessary assumption

Treating a view as certain without allowing appropriate doubt.	A proposed explanation not established by the available evidence.	A reason against a position.
Acknowledgement of a point made by another side, often before limiting or responding to it.	Avoiding a direct response to the issue.	Small in amount or degree in the stated context.
A premise whose failure undermines the given reasoning.	People's choice of a group that may create relevant baseline differences.	The extent, boundaries or range of material included in a task, investigation or subject.

candidate solution	rounding	least common multiple
remainder	domain restriction	simultaneous solution
sector	scale factor	weighted average

The smallest positive integer divisible by each given positive integer.	Reporting a value at a stated precision after calculation.	A value produced by a solving step that still needs checking.
Values satisfying every relation in a system at the same time.	A condition identifying inputs on which the original expression is defined.	The amount left after division into equal whole groups, or the residual expression after algebraic division.
An average that accounts for each group's contribution or size.	The multiplier relating corresponding lengths of similar figures.	A region of a circle bounded by two radii and the arc between them.

mutually exclusive	policy consequence	qualified thesis

A position stating its limits or conditions rather than making an unsupported absolute claim.	An intended or unintended result relevant to judging a proposed rule.	Events that cannot occur together in the same outcome.
