

Solutions

2.1 The protected producer may expand, but assemblers face higher costs, consumers may pay more and exporters may lose competitiveness. Consider supply responsiveness, employment adjustment, revenue, retaliation and feasible alternatives. A temporary training or adjustment policy has its own costs and delivery risks. Review quantities, prices, employment and distribution before judging net benefit. Authored points for identifying relevant evidence, explaining a supported inference and a material limit.

3.1 Foreign-currency imports become more expensive in domestic currency while quantities may adjust slowly because of contracts and limited substitutes. Export and import demand responses and timing determine the later trade-balance effect. Depreciation does not guarantee immediate improvement. Authored points for a relevant judgement, reason tied to the case and justified qualification or method. Accept a supported alternative.
