Word	Example
schema theory	**Schema theory** says we learn general rules for a movement and use them in new situations.
feedback /ˈfiːdbæk/	**Feedback** lets the system check the result and adjust.
intrinsic feedback	**Intrinsic feedback** is the feel of the movement from inside your own body.
extrinsic (augmented) feedback	A video replay from the coach is **extrinsic (augmented) feedback**.
knowledge of result	**Knowledge of result** tells you the outcome, such as whether the shot went in.
knowledge of performance	"Your take-off foot was too far back" is **knowledge of performance**.
stages of learning	The **stages of learning** describe how a beginner becomes skilled.
cognitive stage	In the **cognitive stage**, a beginner thinks hard about every move and makes many mistakes.
associative stage	In the **associative stage**, the learner practises and makes fewer mistakes.
autonomous stage	In the **autonomous stage**, the skill is automatic and needs little thought.
plateau /ˈplætəʊ/	A **plateau** is a period when performance stops improving despite practice.
Learning	A **learning** curve shows how performance improves with practice.

Word	Example
retention test	A **retention test** checks a skill again after a break.
transfer test	In a **transfer test**, the skill is tried in a new situation.
contextual interference	Practising skills in a random order creates **contextual interference**, which helps learning last.
transfer /ˈtrænsfɜː/	**Transfer** happens when a skill from one sport helps in another.
