

16.2 Sexual reproduction

Name: _____ Class: _____ Date: _____

Total: 6 marks

KEY WORDS sexual reproduction 有性生殖 • reproduction 生殖 • fertilisation 受精
• offspring 后代 • variation 变异

Objective

Build the skills to answer exam questions on **sexual reproduction** 有性生殖 — the fusion of **gametes** 配子, **fertilisation** 受精, and **variation** 变异.

You must be able to:

- define sexual reproduction and fertilisation
- explain why it produces variation
- use the terms haploid and diploid

1 Worked examples

■ Gametes and fertilisation

Sexual reproduction: two parents; gamete nuclei fuse at fertilisation to make a zygote

insect-pollinated
bright petals, scent + nectar;
sticky, spiky pollen

wind-pollinated
small dull petals; anthers &
stigma hang out; light pollen

Pollination begins plant sexual reproduction

- gametes are **haploid** (one set of chromosomes); the zygote is **diploid** (two sets).
- offspring get a mix of genes from both parents → variation.

2 Practice

2.1 Define fertilisation.

[1]

2.2 State how many parents sexual reproduction needs.

[1]

3 Exam-style questions

3.1 A gamete nucleus is described as:

[1]

A diploid (two sets of chromosomes)

B haploid (one set of chromosomes)

C having no chromosomes

D identical to the zygote

3.2 Sexual reproduction produces variation.

(a) Explain why the offspring show variation.

[2]

(b) State one advantage of this variation.
