

2.2 Size of specimens

Name: _____ Class: _____ Date: _____

Total: 9 marks

KEY WORDS magnification 放大倍数 • specimen 标本 • size of specimens 标本大小 • cells 细胞
• tissue 组织

Objective

Build the skills to answer exam questions on the **size of specimens** 标本大小 — the **magnification** 放大倍数 formula and converting units.

You must be able to:

- use magnification = image size ÷ actual size (and rearrange it)
- convert between mm and μm
- give magnification as a number with no unit

1 Worked examples

■ Magnification

I = image size
 M = magnification
 A = actual size

$$M = \frac{I}{A}$$

cover a letter to get its formula

Cover the quantity you want: magnification = image ÷ actual; actual = image ÷ magnification

Cells make tissues, organs and organ systems

Image 5.00 mm at ×250: actual = $\frac{5.00}{250} = 0.02 \text{ mm} = 20 \mu\text{m}$.

Units: 1 mm = 1000 μm . Always use the same unit before dividing.

2 Practice

2.1 Write the formula for magnification. [1]

2.2 Convert 0.05 mm into μm . [1]

3 Exam-style questions

3.1 Magnification has the unit: [1]

A	B
C	D

A mm

B μm

C no unit

D cm

3.2 A cell has an actual size of 40 μm . It is drawn 20 mm wide.

(a) Convert the actual size to mm. [1]

(b) Calculate the magnification of the drawing. [2]

3.3 A structure is shown at $\times 400$ and its image size is 8.0 mm. Calculate its actual size in μm . [3]
