

3.3 Active transport

Name: _____ Class: _____ Date: _____

Total: 9 marks

KEY WORDS active transport 主动运输 • root hairs 根毛 • carrier proteins 载体蛋白
• transport 运输 • energy 能量

Objective

Build the skills to answer exam questions on **active transport** 主动运输 — the definition, why it needs energy, and the role of **carrier proteins** 载体蛋白.

You must be able to:

- define active transport (movement against the gradient, using energy)
- explain why it needs energy from respiration
- give an example (root hairs taking up mineral ions)

1 Worked examples

■ Active transport

Active transport: against the gradient, using energy from respiration and a carrier protein

Active transport contrasts with passive diffusion

Process	Direction	Energy?
diffusion	high $\rightarrow$ low	no
osmosis	high $\rightarrow$ low water potential	no
active transport	low $\rightarrow$ high (against)	yes

2 Practice

2.1 Define active transport.

[2]

2.2 State the source of energy for active transport.

[1]

3 Exam-style questions

3.1 Which process moves particles **against** the concentration gradient?

[1]

A	B
C	D

A diffusion

B osmosis

C active transport

D evaporation

3.2 Root hair cells take up mineral ions from the soil.

(a) Name the process used when the ions are more concentrated inside the cell. [1]

(b) Explain why this process needs energy. [2]

3.3 Explain the role of carrier proteins in active transport. [2]
