

# 5.3 Income statements

Name: \_\_\_\_\_ Class: \_\_\_\_\_ Date: \_\_\_\_\_ **Total: 20 marks**

**KEY WORDS** gross profit 毛利润 • expenses 费用 • income statement 损益表  
• cost of sales 销售成本 • profit for the year 年度利润

## Objective

Build the skills to answer exam questions on the **income statement** 损益表 — **revenue**, **cost of sales**, **gross profit**, **expenses** 收入、销售成本、毛利润、费用, and the **profit for the year** 年度利润.

**You must be able to:**

- explain what an income statement shows
- calculate gross profit and the profit for the year
- explain how stakeholders use the income statement

## 1 Worked examples

- **Worked:** revenue \$200,000, cost of sales \$120,000 → gross profit = \$80,000; expenses \$50,000 → profit for the year = \$30,000.
- **Stakeholders use it:** owners check the profit, lenders check their loans are safe, managers spot problems.

*The other main statement: the income statement shows profit over a year, the balance sheet a snapshot on one day*

**Answer shapes:** K + App + An + Ev (a justified judgement, for “do you think” questions).

## 2 Practice

**2.1** Define the term *gross profit*. [2]

**2.2** A business has revenue of \$150,000 and cost of sales of \$90,000. Calculate the gross profit. [2]

**2.3** State one stakeholder who would use an income statement, and why. [2]

### 3 Exam-style questions

**3.1** From the gross profit of \$60,000, expenses of \$40,000 are taken. Calculate the profit for the year. [2]

---

---

**3.2** Explain two reasons why a business prepares an income statement. [6]

---

---

---

---

---

---

**3.3** A business's gross profit is high but its profit for the year is low. Do you think this is a serious problem? Justify your answer. [6]

### Solutions

IGCSE Business answers are marked by **level of response**: award **K** knowledge, **App** application, **An** analysis and **Ev** a justified judgement.

**2.1** revenue minus the cost of sales (the cost of making or buying the goods sold) (2 for a clear definition; 1 for a partial idea).

**2.2**  $\$150,000 - \$90,000 = \$60,000$  (2; award 1 for a correct method with the wrong figure).

**2.3** any one stakeholder + reason: owners — to check the profit; lenders — to check their loan is safe; managers — to spot problems (2 for stakeholder + reason; 1 for stakeholder only).

**3.1**  $\$60,000 - \$40,000 = \$20,000$  (2; award 1 for a correct method with the wrong figure).

**3.2** [6] For **each** of two reasons: K 1 + An up to 2 — e.g. *show profit*: it tells owners how much profit was made → they judge the firm's success. *Find problems*: comparing with last year shows if costs are rising → managers can act. Maximum 3 each.

**3.3** [6] Both sides + judgement. **Yes (serious)**: a high gross profit but low final profit means **expenses** (rent, wages, advertising) are very high → little is left for the owners, and the firm is vulnerable if sales fall. **Not always**: if the firm is investing in growth (e.g. marketing), high expenses now may raise future profit. **Judgement (Ev)**: it is a warning sign worth investigating, but whether it is serious depends on *why* expenses are high — wasteful spending is a real problem, planned investment may not be.
