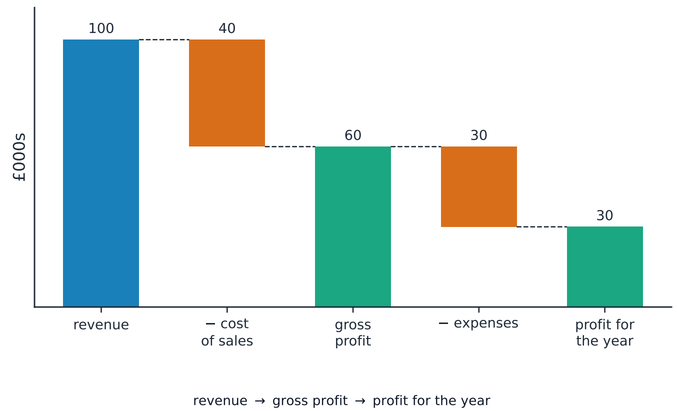
1 Worked examples

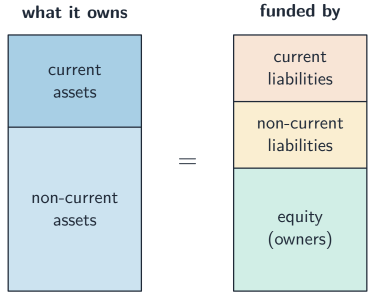
■ Reading an income statement



Revenue → gross profit → profit for the year

gross profit = revenue − cost of sales   profit for the year = gross profit − expenses

- **Worked:** revenue \$200,000, cost of sales \$120,000 → gross profit = \$80,000; expenses \$50,000 → profit for the year = \$30,000.
- **Stakeholders use it:** owners check the profit, lenders check their loans are safe, managers spot problems.



The other main statement: the income statement shows profit over a year, the balance sheet a snapshot on one day
