

11.7 Carboxylic acids

Name: _____ Class: _____ Date: _____

Total: 21 marks

KEY WORDS ester 酯 • ethanoic acid 乙酸 • carboxylic acids 羧酸 • carbonates 碳酸盐
• oxidation 氧化

Objective

Build the skills to answer exam questions on **carboxylic acids** 羧酸 — the -COOH group, the reactions of **ethanoic acid** 乙酸, making it by **oxidation** 氧化 of ethanol, and **esters** 酯.

You must be able to:

- give the reactions of carboxylic acids (with metals, bases, carbonates)
- describe making ethanoic acid by oxidising ethanol
- describe the formation of an ester

1 Worked examples

■ Reactions of ethanoic acid

Carboxylic acids contain -COOH and behave as (weak) acids

Carboxylic acids are weak acids

- – metal → ethanoate salt + hydrogen.
- – base → salt + water; + carbonate → salt + water + CO₂.
- **made by:** oxidising ethanol (acidified KMnO₄, or bacteria → vinegar).
- – alcohol (acid catalyst) → an **ester**.

2 Practice

2.1 State the functional group in a carboxylic acid. [1]

2.2 Name the type of compound formed when a carboxylic acid reacts with an alcohol. [1]

3 Exam-style questions

3.1 Ethanoic acid reacts with a carbonate to give a salt, water and: [1]

A	B
C	D

- A hydrogen
- B oxygen
- C carbon dioxide
- D chlorine

3.2 Ethanoic acid can be made by oxidising ethanol.

(a) Name a reagent that oxidises ethanol to ethanoic acid. [1]

(b) Name the everyday product made when ethanol is oxidised by bacteria. [1]

3.3 Magnesium reacts with ethanoic acid. Name the two products. [2]

3.4 Ethanoic acid, CH_3COOH , is a weak acid.

(a) Draw the displayed formula of ethanoic acid and circle the functional group, naming it. [3]

(b) Give the observation and name the products for ethanoic acid reacting with (i) magnesium, (ii) sodium carbonate. Write a balanced equation for (ii). [5]

(c) Ethanoic acid is warmed with ethanol and a little concentrated sulfuric acid. Name the type of reaction, name the organic product, and state what the sulfuric acid does. [3]

(d) Explain why ethanoic acid is described as a *weak* acid, and state how its pH compares with hydrochloric acid of the same concentration. [3]
