Multiple Choice Answers

Q13: A

3(a)	Define <i>average total cost</i>. Total cost divided by output (2). Cost per unit (1).
3(b)	Explain how using renewable raw materials may affect a firm's profits. Logical explanation which might include the following. • Using renewable resources may be more expensive (1) increase costs of production (1) reduce profits (1). • Can advertise that renewable resources which create less pollution / improve environmental sustainability are being used (1) increase image of the firm (1) raise demand (1) increase profits (1). • Using renewable resources may be subsidised (1). May become cheaper to use renewable resources in the long run (1). • Resources will not be depleted / firms have a constant supply of raw materials (1) raise profits (1).

3(c)

Analyse the internal economies of scale that a cosmetics firm could experience.

Coherent analysis which might include the following.

- Buying / purchasing economies (1) buy ingredients in bulk at a discount (1).
- Labour economies (1) workers specialising e.g. designing the packaging (1).
- Managerial economies (1) e.g. specialist human resource manager (1).
- Technical economies (1) advanced technology could be used to produce perfume (1).
- Financial economies (1) the firm finding it cheaper / easier to borrow from banks (1).
- Research and development economies (1) develop new perfumes (1).
- Selling / marketing economies (1) lower average advertising costs (1).
- Risk-bearing economies (1) selling perfume in more markets (1).

3(d)

Discuss whether or not perfume should be taxed at a higher rate than food.

In assessing each answer, use the table opposite.

Why it should:

- perfume is a luxury whereas food is a necessity
- rich spend more on perfume than the poor
- taxing food more may increase poverty as poor spend a high proportion of their income on food
- perfume is less likely than food to be a merit good
- a higher price for perfume will not significantly contribute to inflation, not a significant item in CPI
- perfume may be imported while food may be supplied by domestic firms.

Why it should not:

- demand for perfume may be elastic and so may not raise much revenue. In contrast, inelastic demand for food so may raise high tax revenue
- perfume may be an important domestic industry. Higher taxes may result in closure / unemployment
- some food is a demerit good e.g. food with a high sugar content
- taxing demerit food may improve health
- taxing food may reduce obesity.

3(d)
