Q17: A

2(a)	Define <i>multinational company</i>. A firm that is based / has its headquarters in one country (1). Operates / produces / sets up / works (1) in another country or countries (1).
2(b)	Explain <u>two</u> reasons why a firm may charge a different price for the same product in two different countries. Logical explanation which might include: • demand may be higher / lower in one country (1) resulting in higher / lower prices (1) • supply maybe higher / lower in one country (1) resulting in lower prices (1) • higher income / GNP per head in one country (1) means more able to afford to pay higher price (1) • price elasticity of demand may vary (1) more power to raise price where demand is inelastic (1) • greater competition in one country / more substitutes (1) leads to lower prices to be competitive (1) • indirect tax rates may vary e.g. higher GST / VAT / import tariffs (1) will lead to higher price (1) • government subsidies may be given in some countries (1) lowering price (1) • local material costs / wages may be lower in one country (1) lowering costs of production mean lower prices (1) • different transport costs (1) may be cheaper to transport to countries close by (1) • quality of good may be higher (1) enable firm to charge a higher price (1).

2(c)	Analyse how opportunity cost influences the decisions made by consumers, workers and producers. Coherent analysis which might include: • opportunity cost is the (next) best alternative (1) forgone / given up (1) • example of consumers e.g. must decide between buying different products (1) due to limited income (1) • example of workers e.g. must decide between different jobs or between work and leisure (1) as time is limited (1) • example of producers / firms e.g. must decide what to make / how to make it / where to locate (1) as they have limited (financial) resources (1).
------	---

2(d)	Discuss whether or not consumers would benefit from an increase in the number of small firms in an industry. In assessing each answer, use the table opposite. Why they might: • more competition, lower price, higher quality • small firms may provide a more personal service • may produce niche products • may be more flexible / react quickly to consumer needs • may introduce new ideas / new varieties of products • may be easier access – consumers may not have to travel so far. Why they might not: • may be wasteful duplication • may waste consumers time with too much information to process • may have higher costs as unable to take advantage of economies of scale • may reduce profits of larger firms, reducing their spending on research and development • may not stay in business for long.
