

E1.8 Standard form

Name: _____ Class: _____ Date: _____ Total: 9 marks

KEY WORDS standard form 科学记数法 • power 幂 • integer 整数

Objective

Build the skills to answer Extended exam questions on **standard form** 科学记数法 — writing numbers as $A \times 10^n$ and calculating with them.

You must be able to:

- write large and small numbers in standard form
- convert standard form back to an ordinary number
- multiply and divide numbers in standard form

1 Worked examples

■ Standard form

$A \times 10^n$ where $1 \leq A < 10$ and n is an integer

- **Convert:** $4\,500\,000 = 4.5 \times 10^6$; $0.00072 = 7.2 \times 10^{-4}$.

Standard form: $A \times 10^n$, with $1 \leq A < 10$

$6\,500\,000 \longrightarrow 6.5 \times 10^6$

point moves 6 places

$0.00042 \longrightarrow 4.2 \times 10^{-4}$

point moves 4 places

standard form: $a \times 10^n$ with $1 \leq a < 10$

Standard form $A \times 10^n$: the power of ten is the number of places the point moves

- **Multiply:** $(3 \times 10^5) \times (2 \times 10^{-2}) = 6 \times 10^3$ (multiply the fronts, add the powers).

Answer shapes: **M1** a correct method, **A1** the correct answer.

2 Practice

2.1 Write 63 000 in standard form. [1]

2.2 Write 0.0045 in standard form. [1]

2.3 Write 2.7×10^{-3} as an ordinary number. [1]

3 Exam-style questions

3.1 Work out $(4 \times 10^6) \times (2.5 \times 10^{-3})$, giving your answer in standard form. [2]

3.2 Work out $\frac{8 \times 10^5}{2 \times 10^2}$, giving your answer in standard form. [2]

3.3 Work out $(3 \times 10^4) + (5 \times 10^3)$, giving your answer in standard form. [2]
