

E6.2 Right-angled triangles

Name: _____ Class: _____ Date: _____ **Total: 12 marks**

KEY WORDS adjacent 邻边 • sine 正弦 • right-angled triangles 直角三角形 • cosine 余弦
• triangle 三角形

Objective

Build the skills to answer Extended exam questions on **right-angled triangles** 直角三角形 — the **sine, cosine and tangent** 正弦、余弦、正切 ratios (SOH-CAH-TOA), to find a side or an angle.

You must be able to:

- label opposite, adjacent and hypotenuse
- use sin, cos, tan to find a missing side
- use the inverse ratios to find a missing angle

1 Worked examples

■ SOH-CAH-TOA

Give angle answers to 1 decimal place

Angles of elevation and depression apply right-triangle trig

$$\sin \theta = \frac{\text{opp}}{\text{hyp}} \quad \cos \theta = \frac{\text{adj}}{\text{hyp}} \quad \tan \theta = \frac{\text{opp}}{\text{adj}}$$

- **Find a side:** hyp 10, angle $30^\circ \rightarrow \text{opp} = 10 \sin 30^\circ = 5$.
- **Find an angle:** opp 4, adj 3 $\rightarrow \tan \theta = \frac{4}{3} \rightarrow \theta = \tan^{-1} \frac{4}{3} = 53.1^\circ$.

Answer shapes: M1 a correct method, A1 the correct answer.

2 Practice

2.1 A right-angled triangle has hypotenuse 12 cm and angle 40° . Find the opposite side. [2]

2.2 A right-angled triangle has opposite 5 cm and hypotenuse 10 cm. Find the angle. [2]

2.3 A right-angled triangle has adjacent 8 cm and angle 35° . Find the opposite side. [2]

3 Exam-style questions

3.1 In a right-angled triangle, the side opposite an angle is 7 cm and the adjacent side is 10 cm. Find the angle. [2]

3.2 A right-angled triangle has hypotenuse 15 cm and an angle of 52° . Find the side adjacent to the angle. [2]

3.3 A ramp rises 1.2 m over a horizontal distance of 5 m. Find the angle the ramp makes with the horizontal. [2]
