UNIVERSITY BUSINESS • EXERCISE SHEET

9.1 Time value of money

Name: _____ Class: _____ Date: _____ **Total: 15 marks**

KEY WORDS discounting • annuity

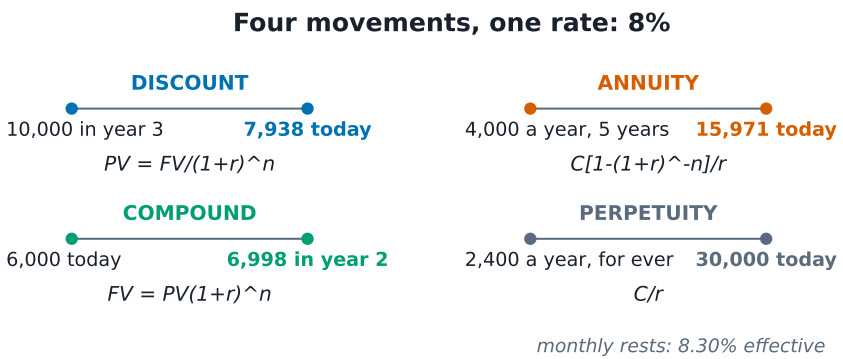

Objective

Move cash across time with the four movements; convert nominal to effective; compare options at one date.

1 Key knowledge and worked examples

The four movements

$PV = FV/(1+r)^n$; annuity $C[1-(1+r)^{-n}]/r$; perpetuity C/r. Nominal with rests: $(1+r/m)^m - 1$ effective.

One date, then compare

Worked example. The second site at 8%

7,938; 6,998; 15,971; 30,000 – the four checks of unit 9.1 ✓.

2 Practice

2.1 Discount £16,000 at 7% for 4 years, and compound £9,000 at 7% for 3 years (nearest pound). [4]

2.2 An equipment lease pays £6,000 a year for 6 years at 7%: value today? And a £3,500-forever sponsorship at 7%? [4]

2.3 A card quotes 1.5% a month. The effective annual rate, and the cost of ignoring the difference on £20,000 over a year (nearest pound)? [3]

2.4 Offer A: £12,000 in year 2. Offer B: £5,000 now + £8,000 in year 3. Which wins at 7%, and by how much? [4]
